Customer Reviews

Diatomaceous Earth in food quality is definitely a subject we need to learn more about. The tips in

this book are worth the price of this little book. I intend to use it as instructed in my garden this year as well as in the house. It seems to be effective against flies. The smaller insects avoid it. I am also using it around my cats as this is the season as spring and summer arrive. A liberal amount in the litter boxes has shown a little bit of a result already. I would like to see more merchants carrying this book and the Earth locally. Be careful because there are two different types. One is for swimming pool filters. The other is for around animals like your pets. Find "food quality" on the labels. The book goes into how much to mix and how to mix it. That is what makes the book worthwhile.

This book is perfect for those who want to explore the uses for diatomaceous earth, otherwise known as fossil flour. It is extremely helpful and puts you in the direction of saying "NO" to pesticides and "YES" to natural ways to keep your environment green and bug free....and other uses too! Check it out!

I purchased some DE recently (in last year) and have used it for many purposes written about in this book. It wouldn't hardly be possible for her to list every parasite, pathogen, bacteria, virus and whatever else in one book, however there is enough information in this book for a "rational" thinking human to grab the ball and run with it. I have used it for ground hornets, bugs on the apple trees and a plum tree, dust mites and many ants. Ants take about 10 minutes before there isn't a movement. I have also used it for a parasite cleanse as I grew up on a farm with chickens, dogs, cats and cows. This is such an incredible product when one considers you can mix it with water and spray it from a hose fitting (for that purpose) and not have to breathe the powder, which is not a good idea without a dust mask. My apple trees have never looked this good this time of year. If I see bugs on the tree I mix up another batch at a cost of very few pennies and spray the tree down. When it dries there is a white film on many leaves and apples. ----- no bugs ----- zero --- zilch..... Isn't that kewl to be able to spray something that dehydrates the bugs without worrying about getting it on you??? I suspect main stream will be fussing a lot when the word truly gets around.

I am only about a quarter of the way through this book and I LOVE IT, and am LEARNING SO MUCH from it! The author has done a fabulous job of breaking the information down in the chapters so you can skip around, if you wish, and only read what is pertinent to you right off the bat, but I want to know EVERYTHING, so I started at the beginning. I am amazed at the amount of information about diatomaceous earth, the differences in FOOD GRADE and NON-FOOD GRADE, and have already used some food grade DE with a distributor (both purchased on). Hubby and I

were both absolutely amazed at how quickly it worked! Tui Rose, the author, explains HOW it works on pests to rid your home of them also. I can hardly wait to read more of this book when I get a chance!

I received this book along with a bag of DE as a gift. The book has been very helpful and informative. I don't have any trouble following what they are trying to say. If I had to say anything negative it would be that they write out the words Diatomaceous Earth too many times instead of just abbreviating it. Otherwise I would recommend the DE and the book together. Especially if you have no experience using DE, like me.

awesome book, lots of uses for lots of different things, including humans, pets, pests, garden, flowers, trees, shrubs, fire ants, roaches, etc.

A friend recommended Diatomaceous Earth for household use. In doing research on this product I came across this book and purchased it. The book is very educational and informative and I am now using DE for my pets, chickens and plants.

This book is the "go to" source for information on diatomaceous earth. Another miracle from Mother Earth...that unfortunately too few people know about!
