Customer Reviews

I am a beginning cabinetmaking student at a local community and technical college here in Minneapolis, and because I know I have much to learn before setting up my own work space, I decided to do some research on the topic. *Setting Up Shop: The Practical Guide to Designing and Building Your Dream Shop* by Sandor Nagyszalanczy is a lovely book on the subject. The photos are wonderful, and some of the shops are not so much places of work but an expression of lifestyle! Particularly beautiful, though by no means the most clever, are those pictured on pp. 15, 58-59 and 84-85. On a more practical level, the book deals with important issues that need to be taken into

consideration prior to putting a shop together. There were a number of points that had not occurred to me before I read the book, and that despite their fairly obvious nature-like dust control and ceiling height and the effect of hard floors on joints. I already had a good idea of where my first shop will be-my basement--and the book provided me with some of the issues most likely to arise out of my choice of location. Of these noise control, dust control in the presence of forced air heating, ventilation during finishing processes, the limitations placed on movement of materials due to ceiling height, the effect of cement floors on my person, and the scarcity of space for large equipment were important to my situation. The book offers a number of clever suggestions to solve some of these problems, and I look forward to finding others for myself. Some of the designs for shop-made shelves for storage are particularly interesting, especially the pull out style wheeled clamp rack that can be stored out of the way in a narrow otherwise unuseable space.
